DETAILED ACTION

Claim Objections

1. Claims 5-32 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to claims in the alternative only and/or cannot depend from any other multiple dependent claims. See MPEP § 608.01(n). Accordingly, the claims 5-32 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Page 3

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Castle USPN 5261874 in view of Ahmad et al. USPN 58588959. Castle describes an extracorporeal blood access sensing, and radiation method and apparatus comprises a line 14 for taking blood from a patient, a pump 18, and inlet 16 to return blood to a patient, a temperature sensor 19 connected to the line, a device 3 for measuring the intensity of the radiation, a connecting portion 4 (col. 5, line 68 through col. 6, line 5). The blood is subjected to electromagnetic waves (col. 1, lines 15-21). The measuring is housed in housing 17 behind a window 32,34. Castle does not specifically disclose first and second signals, however, Castle does teach a means for controlling the temperature. Ahmad teaches a temperature control means for the benefit of controlling and/or changing the temperature of the blood returning to the patient (Ahmad col. 5, lines 20-30). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention of Castle with a temperature control means for the benefits taught in Ahmad.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacqueline F. Stephens whose telephone number is (571) 272-4937. The examiner can normally be reached on Monday-Friday 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
